Section 1: Overview of Change Delivery

When an RGMA exchange request is received for a Class 1 or Class 2 SMP, existing reads associated with the previous asset are cleared from new device installation date +1 up to RGMA processing date but not re-populated.

This change was raised to ensure that the read history of a Class 1 or 2 SMP, following meter exchange, is populated with accurate estimated reads in a timely manner and these are issued to the Shipper and DMSPs via existing file interfaces (MDR/DDR). This will ensure that all parties have an accurate view of the read history, future estimated reads are accurate and any associated risk on submission of future actual reads is reduced.
