### **A2: Impacted Parties**

	☐ Shipper	☐ Distribution Network Operator		
Customer Class(es):	☐ NG Transmission	□IGT		
	⊠ AII	☐ Other <please details="" here="" provide=""></please>		
Justification for Customer Class(es) selection	Supplier short codes are used to identify individual suppliers. This change would allow a single supplier short code to be re-assigned to an appointed Supplier of Last Resort (SoLR) rather than each individual supply meter point undergoing a standard change of supplier event.			
	Impact assessment is required to understand whether this impacts individual market participants.			

# A3: Proposer Requirements / Final (redlined) Change

	The Ofgem Switching Programme Design Baseline 4 published in June 2018¹ indicated that following the implementation of the Central Switching Service (CSS), the preferred implementation of SoLR directions would be given effect using a Market Participant Identifier (MPID) transfer e.g. re-assignment of the failing supplier's short code to the appointed SoLR. This would effectively transfer responsibility for all supply meter points registered against the failing supplier's short code to the SoLR.  In making this statement it was acknowledged that the impacts to CDSP and Transporter systems would need to be determined. Following a further Ofgem review, it is understood that this approach is to be followed as the CSS NFRs would not support a			
Problem Statement:	large scale Supplier failure – and would be inefficient to scale systems for such an event.  This approach would materially vary the treatment of organisations in UK Link systems. This approach is set out in the MDD Market Participant Identity Verification Approach Document. This currently does not allow short codes to be re-used. Therefore, a change is required to enable this in certain circumstances, specifically to give effect to a SoLR direction.			
	For the avoidance of doubt, it is not intended that the reuse of a Shipper Short Code is proposed. A Change of Shipper activity will need to be undertaken in the event that the Shipper entity is changed.			
	Where a supplier short code is associated to a shipper short code (as they are linked to the same organisation), reassignment of the supplier short code will mean that the link between the supplier as shipper will be broken. Impact assessment is required to understand whether breaking this link will affect UK Link and marl participant systems and each parties' processes.			
Change Description:	The Change Proposal will require changes to the MDD Market Participant Identity Verification Approach Document.  This includes changes to the business rules in section 4 to clarify that supplier short codes can be re-assigned as part of a SoLR event and that a single Market Participant Identity could be assigned to different legal entities where the associated supplier and shipper are different.

#### A4: Benefits and Justification

	oustineation
Benefit Description:	This proposal is required to facilitate delivery of the switching arrangements as set out in the DB4 Baseline.  Historically, supplier short code re-assignment has only been used to facilitate transfer of customers as a result of a trade sale, where historic rights and obligations are also transferred. In considering this option for implementation of SoLRs under the new switching arrangements the benefits of this approach have been highlighted, particularly in terms of reliability for consumers by ensuring that all supply meter points associated with the failing supplier's short code are transferred in a single transaction.  Amending the MDD Market Participant Identity Verification Approach Document will clarify the rules associated with supplier short code re-assignment.  It is therefore proposed that this change be made in advance of CSS go live so that it can be utilised under the current arrangements, where deemed appropriate.  What, if any, are the tangible benefits of introducing this change? What, if any, are
Benefit Realisation:	Following the change to the MDD Market Participant Identity Verification Approach Document, supplier short code re-assignment could be used in order to implement SoLR directions, where this is deemed to be the most appropriate approach.  Following CSS go live, it is expected that a supplier short code re- assignment will be used where possible, noting that this will not be an effective solution whether a failing supplier's portfolio is to be split between multiple SoLRs.  When are the benefits of the change likely to be realised?
Benefit Dependencies:	This change is not dependent on any other events / projects. However, a separate change is expected to be progressed under the switching programme to facilitate the timely change of shipper activities also required as a result of a SoLR direction, in order to minimise the time lag between the appointment of the SoLR and the associated change of Shipper where required.  Please detail any dependencies that would be outside the scope of the change, this could be reliance on another delivery, reliance on some other event that the projects has not got direct control of.
