

UIG Graphs – Interim Reporting

30th September 2020

(Updated for August 2020 Amendment Invoice, likely COVID-19 impacts and **UIG to 28th September Gas Day**)

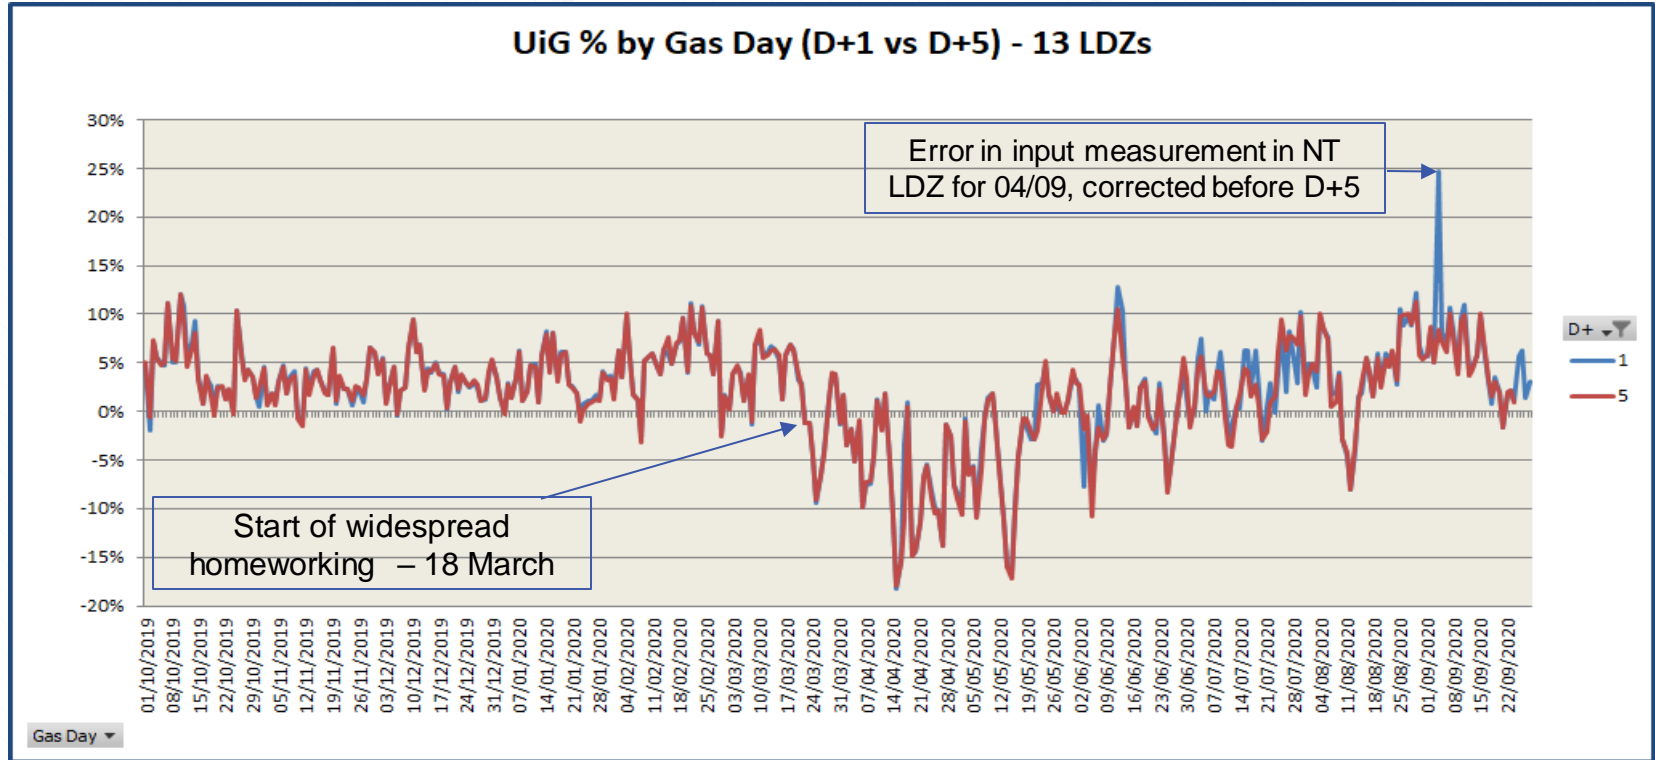

Background

- Unidentified Gas (UIG) is a high priority issue for the Gas Industry
- Xoserve established a Task Force in 2018 to identify the causes of daily UIG and make recommendations to reduce/remove those causes
- Xoserve has set up an internal project to automate some of its regular UIG reports and publish to its website
- In the meantime, this presentation includes two of the regular reports:
 - **Weekly** tracker of daily National UIG as a percentage of total throughput (comparing D+1 and D+5 post Gas Day)
 - **Monthly** tracker of latest UIG as a percentage of total throughput accounting for estimated phasing of meter point reconciliation

Impacts of COVID-19

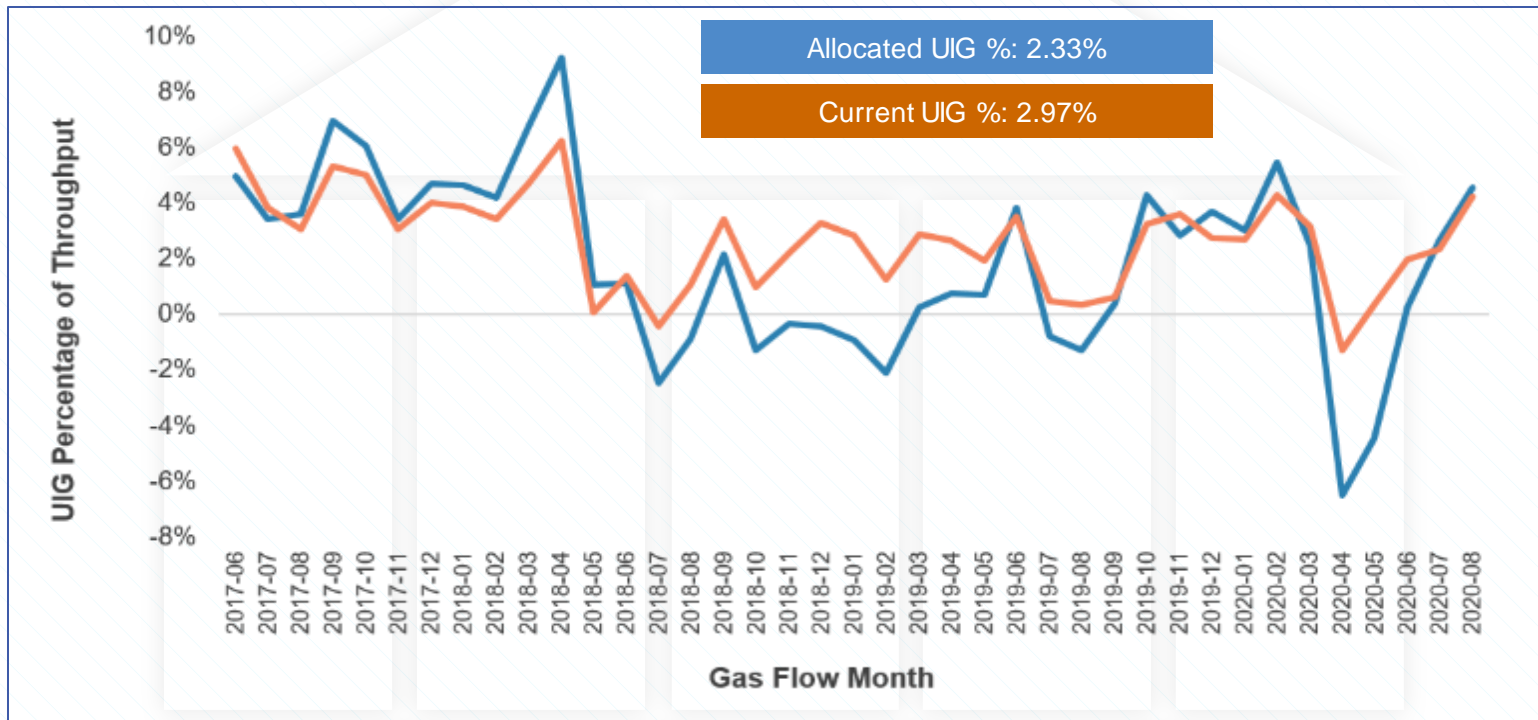

- The unprecedented and unexpected social isolation measures are likely to have a significant impact on GB gas demand:
 - Consumption increases at (most) Domestic properties compared to daily allocation
 - Consumption decreases or ceases at many Industrial/ Commercial (I&C) properties compared to daily allocation
 - UIG as the balancing figure fluctuates to correct the LDZ position
- Early indications suggest UIG will be more negative on weekdays, more positive on weekends or in holiday periods
- Other factors such as weather and demand reactions, LDZ and DM measurements also will continue to affect UIG
- Xoserve provides regular updates on its response to COVID-19 on its website: <https://www.xoserve.com/covid-19/>

Daily UIG since start of Gas Year 2019/20

Please refer to the recent Xoserve news article about UIG levels since 1 October:
<https://www.xoserve.com/news/update-on-unidentified-gas-levels-in-october-2019/>

UIG as a % of Total Throughput – Original v Latest as at August 2020 Amendment Invoice

- Graph of national UIG after meter point reconciliations (all Classes) processed up to and including end of August 2020 (39 months)

Other Sources of UIG Information

- We have put together a summary of all the sources of data currently available – including those in the public domain
- You can find the summary by following this link:
<https://www.xoserve.com/media/4417/data-sources-for-uig.pdf>

The logo for 'xserve' is centered within a stylized window frame. The 'x' is a dark blue, bold, sans-serif character. The 's' is a lighter blue, sans-serif character. The 'e' is a medium blue, sans-serif character. The 'r' and 'v' are also in the same medium blue color. The 'e' and 'v' are connected to the 'r'. The entire logo is set against a background of a light blue and white diagonal grid pattern. The window frame is a simple grey outline with four vertical panes. The top of the frame is a triangle, and the bottom is a rectangle. The overall image has a clean, modern aesthetic with a blue and white color palette.
